

BUSINESS REQUIREMENTS DOCUMENT

Legal Contract Q&A Assistant

Chat with Contracts, Agreements, and Legal Documents

Prepared for: Project Stakeholders

Document Type: Business Requirements Document (BRD)

Date: July 2, 2026

1. Executive Summary

The Legal Contract Q&A Assistant is an AI-powered web application designed to help users understand legal contracts, agreements, and other legal documents through natural language conversations. Instead of manually searching through lengthy documents, users can upload a contract and ask questions such as “What is the notice period?”, “When does the agreement expire?”, or “What are the payment terms?” The system analyzes the uploaded document and provides relevant, context-aware answers while referencing the corresponding clauses.

Project Objective

Simplify contract analysis, improve productivity, reduce review time, and make legal information more accessible to both legal professionals and non-legal users.

2. Problem Statement

Legal contracts are often lengthy, complex, and written using technical legal language that can be difficult for individuals and organizations to understand. Reviewing contracts manually is time-consuming and increases the risk of overlooking important clauses such as payment terms, termination conditions, liabilities, renewal dates, confidentiality obligations, and dispute resolution procedures.

Many businesses, startups, HR departments, procurement teams, and even legal professionals spend significant time locating specific information within contracts. Existing document search methods rely heavily on manual reading or simple keyword searches, which often fail to capture the context or meaning of legal provisions.

There is a growing need for an intelligent solution that enables users to interact with legal documents using natural language, retrieve accurate information instantly, and improve decision-making while maintaining document privacy and security.

3. Vision

Our Vision

To develop a secure, intelligent, and user-friendly AI assistant that transforms the way individuals and organizations interact with legal documents by making contract analysis faster, easier, and more accessible through conversational AI.

4. Mission

Our Mission

To provide users with an AI-powered platform that allows them to upload legal documents and receive accurate, context-based answers instantly while ensuring privacy, reliability, and ease of use.

5. Goals

- **Optimize contract review efficiency** by reducing the time required to analyze legal documents.
- **Enhance legal document comprehension** through AI-driven natural language interactions.
- **Deliver context-aware and document-grounded responses** based exclusively on uploaded contracts.
- **Enable intelligent retrieval of contractual clauses** using semantic search and conversational querying.
- **Ensure secure and confidential document processing** through robust authentication and data protection mechanisms.
- **Provide a scalable, user-centric AI platform** with an intuitive interface for efficient use.

6. Project Objectives

Goals describe the desired business outcomes, while objectives describe the specific actions and capabilities the project will deliver to achieve those goals. Keeping them distinct makes this BRD more professional.

- Develop an AI-powered conversational platform for interacting with legal contracts and agreements.
- Implement secure document ingestion and processing for supported legal document formats (PDF, DOCX, and TXT).
- Enable intelligent question-answering by leveraging document-aware AI to retrieve relevant information.
- Provide clause-level referencing to improve the transparency and traceability of AI-generated responses.
- Design a responsive and user-centric interface that ensures seamless document management and interaction.

7. Target Users

The system is designed for multiple categories of users, including:

Primary Users	Secondary Users
• Lawyers	• HR Professionals
• Legal Consultants	• Business Owners

Primary Users	Secondary Users
• Corporate Legal Teams	• Startups
• Contract Managers	• Students Studying Law
• Procurement Departments	• Researchers
	• Government Organizations
	• Compliance Officers
	• Freelancers Working with Contracts

8. Stakeholders

The success of the project depends on collaboration between multiple stakeholders:

Stakeholder	Role in the Project
Business Owner	Defines business goals and approves scope and budget
Project Manager	Oversees planning, execution, and delivery timelines
AI/ML Development Team	Builds and trains the document Q&A and retrieval models
Frontend Development Team	Develops the user-facing web application
Backend Development Team	Builds APIs, business logic, and system integrations
UI/UX Designers	Design intuitive and accessible user experiences
Database Administrator	Manages data storage, integrity, and performance
Testing Team (QA)	Validates functionality, performance, and security
End Users	Use the platform to analyze and query legal documents

9. Proposed Solution

The Legal Contract Q&A Assistant provides an AI-based conversational interface where users can upload legal documents and interact with them through simple questions. Instead of reading an entire contract, users can ask questions naturally, such as:

- What is the contract duration?
- Who is responsible for payment?
- Is there a termination clause?
- What happens if the agreement is breached?

The AI analyzes the uploaded document, retrieves relevant sections, and generates answers based solely on the document's content while referencing the applicable clauses.

10. Scope

In Scope	Out of Scope
User registration and authentication	Providing legal advice
Upload legal contracts	Editing legal contracts automatically
AI-powered document analysis	Predicting court judgments
Natural language question answering	Generating legally binding contracts
Chat history	Representing users in legal disputes
Clause highlighting	
Multiple document support	
Secure document storage	
Responsive web application	
User dashboard	
Search within uploaded documents	

11. Prioritized Features (MoSCoW Prioritization)

Must Have	Should Have	Could Have	Won't Have (v1)
• User Login & Authentication	• Document Summarization	• Voice Input	• Legal Consultation
• Upload PDF/DOCX Contracts	• Keyword Search	• Multi-language Support	• Automatic Contract Drafting
• AI Chat Interface	• Download Chat	• Contract Comparison	• Court Case Prediction
• Question Answering	• Multiple Document Management	• Smart Notifications	
• Clause Referencing			
• Chat History			
• Secure Document Storage			

12. Functional Requirements

Document Management

- Upload PDF, DOCX, and TXT files
- Store uploaded documents securely
- Delete documents

- Rename uploaded files
- View uploaded documents

AI Question Answering

- Ask questions using natural language
- Generate answers from uploaded contracts
- Display referenced clauses
- Handle multiple questions in one session
- Inform users if no relevant answer exists

Chat Management

- Save conversation history
- Continue previous conversations
- Delete chat history
- Export chat as PDF or text

Search Functionality

- Search uploaded documents
- Highlight matching sections
- Filter documents by name or date

Administration

- Manage users
- Monitor uploaded documents
- View system activity
- Manage permissions

13. Non-Functional Requirements

Category	Requirements
Performance	Response time less than 5 seconds; fast document upload; efficient search performance
Security	User authentication; data encryption; secure document storage; HTTPS communication; role-based access control
Reliability	High system availability; automatic backup; error recovery mechanisms
Scalability	Support thousands of users; handle multiple concurrent document uploads; cloud-ready architecture
Usability	Clean interface; easy navigation; mobile responsive; simple chat interface
Compatibility	Chrome, Firefox, Microsoft Edge, Safari; desktop and mobile devices
Maintainability	Modular architecture; easy software updates; error logging; documentation

14. Business Rules

- Users must authenticate before uploading documents.
- AI responses must be based only on uploaded documents.
- Documents remain private and accessible only to authorized users.
- Unsupported questions should return an informative response rather than fabricated information.
- Uploaded files must comply with supported formats.

15. Assumptions

- Users have internet access.
- Documents are readable and not corrupted.
- AI models are properly trained for legal document understanding.
- Users upload documents they are authorized to access.

16. Constraints

Important

The AI cannot provide legal advice. Accuracy depends on document quality, large documents may require longer processing time, and internet connectivity is required at all times.

17. Technology Stack (Suggested)

Layer	Technologies
Frontend	HTML, CSS, JavaScript, React.js, Bootstrap / Tailwind CSS
Backend	Python (FastAPI or Flask)
AI	Large Language Model (LLM), Retrieval-Augmented Generation (RAG), Vector Database
Database	PostgreSQL / MongoDB
Storage	Cloud Storage (AWS S3 or equivalent)

18. Expected Benefits

For Users	For Organizations
• Faster contract review	• Lower operational costs
• Easy understanding of legal documents	• Increased efficiency
• Reduced manual effort	• Enhanced compliance
• Improved productivity	• Improved document accessibility
• Better decision-making	• Secure management of confidential contracts

19. Future Enhancements

- Multi-language contract support.
- Voice-based document interaction.
- Contract comparison across multiple documents.
- AI-powered contract summarization.
- Risk and compliance analysis.
